📁 PROJECTS

Hand Controlled Robotic Arm

This prototype is a wireless, hand-controlled robotic palm that makes data transmission by using the "nrf module". This design enables precise movement of fingers back and forth. Further improvement for this project is done by incorporating image processing capabilities so that it enables the prototype to be more efficient.

Orientation Specifier

This project involves the development of an application that accurately determines the subject's orientation. The application presents a graphical representation of the subject's orientation, which dynamically changes over time. Furthermore, users can conveniently download and access this orientation data for further analysis and use.
